

INSTRUCTIONS - **AGC1** – Adjustable Gun Cradle Kit – Fits all Idleback Chairs

Take advantage! With this system you can use your Chair for Spotting Scope, Camera and Binocs! Using the Quick Release System

To fit AGC1 to this version you need to remove the large bracket as well!

Take GC off leaving 'U' bracket

Both versions, leave the 'U' bracket attached to chair

AGC1

ORIGINAL CHAIR WITH OFF-SET BACK

AGC1 – ADJUSTABLE GUN CRADLE KIT

Cradle Adjustment: The two halves of the cradle mate together quite solid for obvious reasons.

Slacken the Lock Lever, you may need both hands to open the jaws.

With the rifle forend in the cradle squeeze the jaws together until they hold the forend to your liking, then re-lock the lever. It's as easy as that!

If you want to change the height of the Gun Cradle, undo the collars with the 3mm hex key and adjust to your preference. NOTE: secure one of the collars first, then squeeze other collar until it sandwiches the bracket tightly, then lock that collar in place. If the cradle rocks! It means you haven't squeezed them together tight enough, so undo one of the collars, apply more pressure then re-tighten the grub screw. If done correctly it will not rock but will still rotate.

"I have several different rifles but typically use one of them most of the time, so the cradle stays set for that rifle! Obviously if I use a different rifle I simply reset the Gun Cradle Jaws to that rifle."

1. Take off the original Gun Cradle. You will need a 13mm spanner.

4. Open the Lever Catch to release the QR base from the QR plate. Note the relationship between base and plate.

7. This shows the final position of the QR base when fitted. You will need a 9/16"-15mm spanner. It needs to be tight!

10. The direction on the cradle is best set when sat on the chair with the rifle, to suit l/h r/h and shooting style for your comfort. Lock in place with the screw as shown.

2. Enlarge the hole in the top of the bracket to 9.5-10mm. De-burr the hole.

5. Insert the 3/8" bolt through the hole in the bracket so the threads are pointing upwards.

8. With the Lever Catch on the QR base pointing outward – insert the QR plate into the base. The Lever will automatically close.

Min. 45mm to Max. 65mm adjustment

11. Slacken the Lock Lever to enable you to open the jaws of the gun cradle. See Cradle Adjustment above.

3. Unscrew the 3/8" bolt from the underside of the quick release base

6. Screw the QR base to the bolt to secure it to the bracket.

9. DONE! Push the Lever home so there is no movement.

With AGC1 you can now use your chair for binos, spotting scope and camera! Simply detach the Gun Cradle from the QR base, buy additional QR plate, attach the plate to the optic, attach to QR base and away you go! Simple!
